

Statistics and Final Thoughts of Covid

World Wide there has been 102 million cases of covid. In January 2020 there was about 282 cases. Around May 28 there was about 100,000 new cases worldwide and then around July 20 there was around 300,000 new cases world wide. December 31 there were 700,000 new cases and this month there was over 2 million cases. This virus affected me in that I couldn't see my grandma and I couldn't see my friends. I also couldn't go to school so we have online school and I do not like it at all.
