### Predictions

I predict that after Coronavirus Disease 2019 or Sars cov2 or Severe acute respiratory coronavirus disease 19 that Countries will crack down on china's hunting of endangered animals such as the chinese pangolin or the *Manis pentadactyla* and close down many wet markets in order to stop zoonotic viruses from mutating and jumping to *Homo Sapien* species. They will probably criticize China a lot for allowing unregulated meat markets along with bypassing health inspections. Meanwhile the USA will finally tie minimum wage to inflation.

### Theme check in

I don't do resolutions instead I do themes for a year

See more here:[an explanation of themes](#)

Unlike resolutions themes don't have a specific goal. That means that unlike new year's resolutions themes allow way more flexibility and as a result you are less likely to give up.

This year is the year of innovation.

I have decided to build more things and circuits like maybe an alarm clock that spray water on your face.

It's going fine.

### Something useful

Instead of a skill I am going to ask people to tell me a device that would solve a small problem and I would build it. Like I would build the alarm clock that could get you out of bed easier or maybe an AI that would automatically generate believable Coronavirus entries(stupid covid journals go jump in a lake.) I could maybe just code a dark mode for inewman so that it doesn't burn my retinas out at night bird.
