

Statistics

There are 2.16M people who. Died from covid world wide out of 100M cases. Almost everyone knows someone who got it. They got a vaccine now which is good to stop covid. In my state alone there are 38,927 deaths. I hope that the end of covid is near although covid is spiking right now but they say it is just because of the holidays. And it is slowly going down. If the vaccine works we should be back to normal after summer. I am not very scared of getting it because mostly only old or unhealthy people die from it.
